

Fall 2023 Data 605 Homework 1

Jean Jimenez

2023-08-31

Assignment

For this weeks homework assignment, we had to draw our initials onto a plot in R and then perform shear, scaling, rotation, and projection and then animate the plots.

I am lucky that my initials are JJ.

My strategy was to first draw the letter J.

```
#My initials are JJ

# Vertical line of J
x1 = rep(0, 1000)
y1 = seq(-1, 1, length.out=1000)

# horizontal bottom of J
x2 = seq(-0.25,0, length.out=125)
y2 = rep(-1,125)

# horizontal top of J
x3 = seq(-0.25,0.25, length.out=250)
y3 = rep(1,250)

#small vertical part of J
x4 = rep(-0.25, 250)
y4 = seq(-1,-0.5, length.out=250)

# Combine the coordinates for the first J
first_x = c(x1,x2,x3,x4)
first_y = c(y1,y2,y3,y4)
plot(first_y~first_x, xlim=c(-3,3), ylim=c(-3,3))
```

Then I repeated it but shifted to the right. I then combined the two J's on the same graph.

```
#Shifting the second J by 2 to the right so i add 2 to x
```

```
second_x=first_x+2
```

```
second_y=first_y
```

```
#Both Js combined
```

```
x=c(first_x,second_x)
```

```
y=c(first_y,second_y)
```

```
# plot
```

```
plot(y~x, xlim=c(-3,3), ylim=c(-3,3))
```

Afterwards, I turned the coordinates of JJ into a matrix.

```
# matrix from the x and y coordinates
coord_matrix = matrix(c(x, y), ncol=2)
coord_matrix
```

```

## [3247,] 1.750000000 -0.506024096
## [3248,] 1.750000000 -0.504016064
## [3249,] 1.750000000 -0.502008032
## [3250,] 1.750000000 -0.500000000

```

```

plot(coord_matrix, xlim=c(-3,3), ylim=c(-3,3))

```

Then, I made plots for each of the linear transformations I performed. I also defined the identity matrix and used that for some of the plots.

```
# Identity matrix
identity_matrix = matrix(c(1, 0, 0, 1), ncol=2)
identity_matrix

##      [,1] [,2]
## [1,]    1    0
## [2,]    0    1

#shear randomly
shear_matrix=identity_matrix
shear_matrix[1,2]=3
shear_matrix[2,1]=2
transformed_matrix_shear= coord_matrix %*% shear_matrix

#scaling making JJ smaller by half
scale_matrix=identity_matrix
scale_matrix[1,1]=0.5
scale_matrix[2,2]=0.5
transformed_matrix_scale=coord_matrix %*% scale_matrix

#rotation clockwise .8 rad
```

```
rot_matrix=matrix(c(cos(0.8),-sin(0.8),sin(0.8),cos(0.8)),ncol=2)
transformed_matrix_rot=coord_matrix %*% rot_matrix
```

```
#projecting onto x axis
```

```
proj_matrix=matrix(c(1,0,0,0),ncol=2)
transformed_matrix_proj=coord_matrix %*% proj_matrix
```

Finally, I combined all plots in a loop at the end.

I had to put all of the plots in a list so that I can loop through them all.

I also added a title for each transformation.

I added the sleep function so that it can slow down the loop an we can see it.

x11() to open new window

```
matrices = list(coord_matrix, transformed_matrix_shear, coord_matrix, transformed_matrix_scale, coord_m
titles = c("Original JJ", "Shear Transformation", "Original JJ", "Scaling Transformation", "Original JJ
```

```
# Open a new plotting window
```

```
x11()
```

```
for (i in 1:length(matrices)) {
```

```
  # Clear the plot window
```

```
  plot.new()
```

```
  plot(matrices[[i]][,2] ~ matrices[[i]][,1], xlim=c(-3,5), ylim=c(-3,3))
```

```
  #cycle thru titles
```

```
  title(main=titles[i])
```

```
  #wait b4 continuing
```

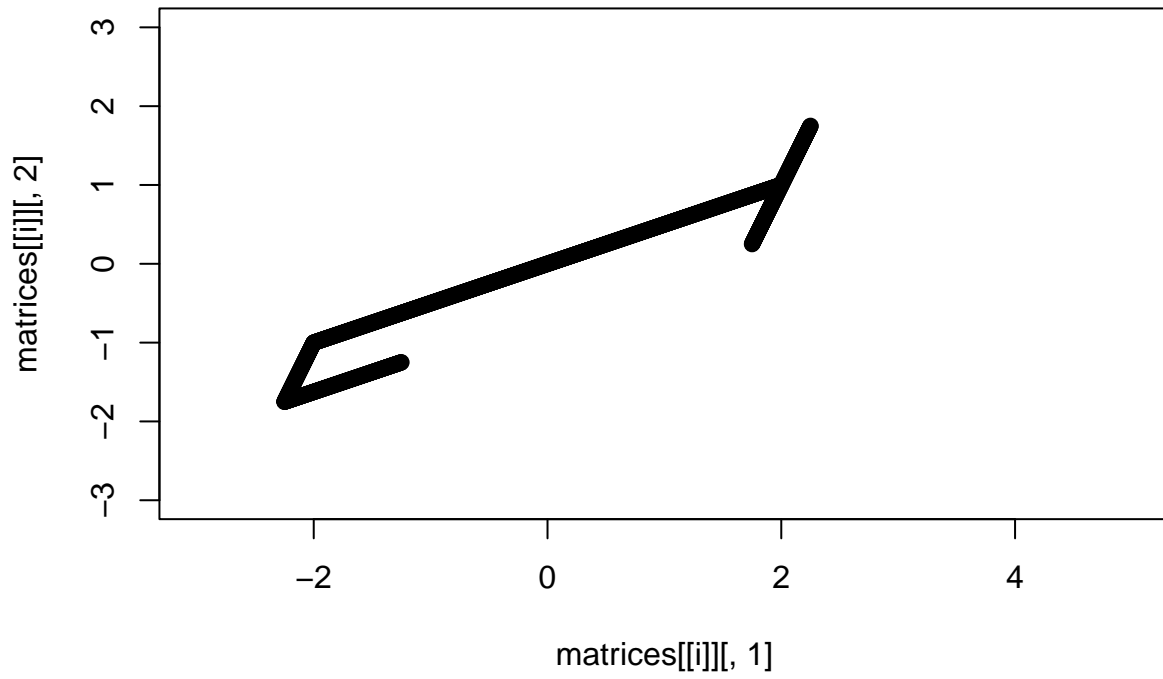

```
  Sys.sleep(3)
```

```
}
```
